NEW SOD INSTRUCTIONS

- When installation is complete, we will check our work to make sure nothing is missed, this involves running the irrigation system. When running each zone, we check to be sure all irrigation heads are out and check the adjustment of the heads are cut & check the adjustment of the heads to be sure all sod is being watered. Lake's Irrigation professionals will stop by & run through the system if needed. Please do not hesitate to call if you have any concerns.
- Watering schedule: start watering immediately after installation to prevent the sod from drying out.
- Your system is already pre-programmed to water 3 times day to water new sod. Please do not adjust any of the run or start times for a minimum of 10 days.
- After the first 10-12 days you will want to turn the irrigation system to off and allow your yard to dry out for at least 2 days prior to mowing for the first time.
- Never mow less than 1/3 of the height of the grass. Bagging your first initial mow is recommended.
- Please do not leave grass clippings on the first mow.
- After the initial mowing you are now ready to turn the irrigation system back on and adjust the watering times appropriately. This may be one or two times a day. Suggested run times are 12 am (midnight) and 6 am and third suggested time is 6-7 pm. Avoid watering during daytime hours or peak sunshine/hot times of the day.

PLEASE DO NOT FORGET TO WINTERIZE YOUR IRRIGATION SYSTEM IN THE MONTH OF OCTOBER.
